TEXAS, North									
Limestone County Groesbeck	04	0307CST 0500CST			0	0			Flash Flood
			An upper level low pressure system was stationary over Baja California from the 2nd through the 3rd then moved across Texas on the 4th. Upper level moisture was drawn into the area from the Pacific while low level southerly flow increased moisture from the Gulf of Mexico. Widespread showers and thunderstorms formed across northern Texas ahead of the approaching system. Strong thunderstorms repeatedly moved over the same areas and locally heavy rainfall rates of one to two inches per hour fell on already saturated soils for much of the morning. Widespread flash flooding resulted across the central and eastern portions. A Pacific cold front accompanied the upper system into the western portions of the area during the early afternoon. Cooler and drier air aloft associated with the disturbance resulted in a gradual destabilization of the atmosphere and the heavy rain event quickly transitioned into a severe weather outbreak as thunderstorms erupted along the front. These scattered severe storms moved eastward and produced hail larger than baseball size, winds up to 70 mph, and a tornado.						
			Heavy rain resulted in street flooding in and around Groesbeck.						
Limestone County 5 SE Groesbeck	04	0810CST 1000CST			0	0			Flash Flood
			High water was reported over Farm-to-Market Road 937.						
Bell County Temple	04	0836CST 1100CST			0	0			Flash Flood
			High water was reported over several city streets and roads.						
Bell County 5 N Temple	04	0915CST 1200CST			0	0			Flash Flood
			Very heavy rain on saturated ground flooded portions of I-35.						
Bell County Belton	04	1148CST 1400CST			0	0			Flash Flood
			Several roads throughout the county were flooded by heavy rain.						
Bell County Belton	04	1458CST 1700CST			0	0			Flash Flood
			High water continued to flood area roads and at least one helicopter rescue was necessary.						
Bell County Belton	04	1830CST 2100CST			0	0			Flash Flood
			Several roads continued to be flooded throughout the county.						
Bell County 4 N Temple	04	1840CST			0	0	1K		Thunderstorm Wind
			A road sign was blown down by high winds.						
Bell County Salado	04	1905CST			0	0			Hail (0.75)
Bell County Belton	04	1915CST			0	0	2K		Thunderstorm Wind
			Strong winds blew down trees and power lines.						
Bell County Temple	04	1915CST			0	0			Hail (0.75)
Johnson County Cleburne	04	0851CST 1100CST			0	0			Flash Flood
			Numerous roads were reported flooded throughout the county.						
Johnson County Cleburne	04	0900CST 1100CST			0	0			Flash Flood
			An underpass on Highway 171 south of town was flooded and barricaded.

	12	0400CST			0	0			Extreme Cold
	13	0900CST							
An unusually strong arctic cold front moved into North Texas on the 11th, setting the stage for a night of strong radiational cooling as high pressure built into the southern plains behind the front. Clear skies combined with light winds and a dry atmosphere to produce temperatures in the mid 20s to lower 30 across much of the area on the morning of the 12th. Even colder readings were realized on the morning of the 13th. The last freeze of the season usually occurs in mid to late March in northern Texas and this month's freeze was one of the latest on record. Unfortunately, mild late winter and early spring weather resulted in an early start to the growing season. The extended period of below freezing temperatures and a heavy frost over the two day period took a tremendous toll on the area's agriculture. The fruit crop, including melon, peach, cantaloupe, plum, and apricot, as well as the vegetable crop, took a 75 to 90 percent loss in several counties in the northwestern portion of the area.

	20	1800CST 2200CST			0	0			Severe Thunderstorms
An upper level disturbance moved into western North Texas during the afternoon and destabilized the moist air mass in place over the region. Scattered to numerous thunderstorms developed along the dry line that had moved into the western zones during the early evening hours. These storms moved eastward across much of north central Texas through the evening, and produced hail up to golfball size and damaging straight-line winds.

TEXAS, North

A front became stationary across the northwestern portions of the area and just south of the Red River during the evening hours of the 21st. A surface low had developed between Abilene and Waco, and a dry line extended southward from the low into the Hill Country. Moist and very unstable conditions were in place to the south of the front and east of the dry line. The approach of an upper level system weakened a capping inversion across northern Texas enough to allow severe thunderstorms to erupt over the region. These severe storms continued through the early morning hours of the 22nd with numerous reports of golfball to baseball size hail, winds of 70 to 80 mph, and a tornado.
